Objective:

- **User-Friendly ecosystem:** Provide an easy-to-navigate platform for players to discover, purchase, install, update, and play games easily.
- **Comprehensive developer tools and support:** A set of tools for developers to manage their platform, track player accounts, adjust updates, and connect with other features
- **Security and data protection:** Ensure the highly protected protection of user information, payment, and other private data.
- **Communication and Social Feature:** Provide a friendly environment where players can communicate with other players, add friends, trade items, and post status.
- **Convenient Payment:** Provide an effective and responsive service for purchasing and selling games to users.

To summarize, the primary objective of the game management platform is to provide a effective, sophisticated, and approachable platform that developers can easily manage the system, while gamers have a reliable and enjoyable experience.

Scope:

1. User Management:

- Player Registration and Profiles: Players can create and manage profiles, view their statistics, and track game progress.
- Administrator Roles: Admins will have access to create, edit, and delete games and events.
- User Authentication: Secure login system using email/password and third-party login options (Google, Facebook).

2. Game Management:

- Game Creation: Admins can create and configure new games, including settings like difficulty, rules, and gameplay duration.
- Game Scheduling: Option to schedule games and tournaments with reminders sent to participants.
- Score Tracking: Automatic tracking and display of player scores and leaderboard generation.
- Multiplayer Management: Set up multiplayer sessions and manage participant invites, slots, and game rooms.

3. Event Management:

- Event Creation and Scheduling: Organize gaming events or competitions and send notifications to players.
- Leaderboard and Rankings: Automated updating of leaderboards and individual rankings after each event.
- Result Tracking: Store results for each event, and display analytics for wins/losses and player performances.

4. Payment Integration:

- In-Game Purchases: Allow players to make purchases within the platform using integrated payment gateways.
- Subscriptions and Fees: Option for subscription-based services or one-time fees for premium features.

5. Notifications and Communication:

- Push Notifications: Alerts for upcoming games, events, or important updates.
- In-app messaging: admins can communicate with players through the platform.

6. Analytics and Reporting:

- Player Statistics: Track player performance across games, including win/loss ratio and gameplay statistics.
- Game and Event Reports: Generate reports summarizing the details of each game/event, including player participation and overall performance.

- Platform Usage Analytics: Admin dashboard displaying usage metrics, including active players and game session frequency.

7. Security and Privacy:

- Data Encryption: All user data (including payment information) will be encrypted to ensure security.
- GDPR Compliance: Ensure that the platform adheres to data protection laws, including options for data deletion and privacy controls.

8. Mobile and Web Access:

- Responsive Design: Ensure the platform is accessible via desktop, mobile, and tablet devices.
- Mobile App: A dedicated mobile application to improve accessibility, user engagement, and expand the audience reach.

Time:

Start date: September 1, 2024

End date: January 31, 2025

Budget:

● Hardware Resource:

- Servers (for hosting the platform): \$8,000
 - Cloud-based servers (e.g., AWS, Azure) or physical servers, including setup and configuration.
- Backup and Storage: \$2,500
 - Data backup systems and storage for game data, user profiles, and media.

Total Hardware Costs: \$10,500

● Software Resource:

- Game Management Platform Software (custom development or license): \$10,000
 - Development costs or licensing fees for a custom or third-party game management platform.
- Database Software (e.g., MySQL, PostgreSQL): \$500
 - Database management for user data, game records, leaderboards, etc.
- Web and Mobile App Development (React, Flutter): \$1,000
 - Development frameworks and tools for building a responsive platform.
- Payment Gateway Integration (for in-game purchases or subscriptions): \$2,000
 - Integration costs for payment gateways like Stripe or PayPal.
- Security Software and SSL Certificates: \$1,200
 - Encryption and other security protocols to ensure data protection.

Total Software Costs: \$14,700

- **Human Resource:**

- Project Manager: \$8,000
 - Managing development, deployment, and overall coordination (salary or hourly).
- Software Developers: \$30,000
 - Developers for the platform (frontend, backend, and mobile) across various project stages.
- Game Designers: \$10,000
 - Designing game experiences, including UI/UX.
- QA Engineers: \$5,000
 - Testing the platform for bugs, performance, and security.
- Support and Maintenance Team: \$6,000
 - For ongoing support post-launch, including handling bug fixes and updates.

Total Human Resources Costs: \$59,000

- **Others Resource:**

- Marketing and Promotions: \$10,000
 - Social media marketing, ads, and community outreach for the launch.
- Legal and Licensing: \$3,500
 - Costs for legal support, game licensing, and compliance.
- Training and Documentation: \$1,500
 - Training materials for admins and documentation for users.
- Miscellaneous Costs: \$2,000
 - Other unexpected expenses or overhead.

Total Other Costs: \$17,500

Total Project Budget:

- **Hardware Resources:** \$10,500
- **Software Resources:** \$14,700
- **Human Resources:** \$59,000
- **Other Resources:** \$17,500

Grand Total: \$101,700
